### Advantages

Special surfactant coatings enable excellent dispersion of individual filaments, allowing the formation of homogeneous three-dimensional matrix within the concrete mix. The inclusion of Construction fibres provides significant technical benefits in both the plastic and hardened state of concrete.

### Mixing instructions

When adding fibres into a cementitious product careful attention must be taken in the batching and mixing procedure in order to achieve optimum results. If you need further details on the recommended mixing instructions, please consult a member of the PP Nordica team.

### Storage

Fibres must be stored on a clean surface in dry conditions, undercover and away from the possibility of damage.
